**1.5 Historical Development**

- Moore's Law (1965)
  - Gordon Moore, Intel founder
  - “The density of transistors in an integrated circuit will double every year.”
- Contemporary version:
  - “The density of silicon chips doubles every 18 months.”

**But this “law” cannot hold forever ...**

**1.5 Historical Development**

- Rock's Law
  - Arthur Rock, Intel financier
  - “The cost of capital equipment to build semiconductors will double every four years.”
  - In 1968, a new chip plant cost about \$12,000.

**At the time, \$12,000 would buy a nice home in the suburbs.  
An executive earning \$12,000 per year was “making a very comfortable living.”**

### 1.5 Historical Development

- Rock's Law
  - In 2012, a chip plants under construction cost well over \$5 billion.
  - \$5 billion is more than the gross domestic product of some small countries, including Barbados, Mauritania, and Rwanda.**
  - For Moore's Law to hold, Rock's Law must fall, or vice versa. But no one can say which will give out first.

NOTE:  
 1. The register size and external data bus size are given in bits. Note also that each 32-bit general-purpose (GPR) registers can be addressed as an 8- or a 16-bit data registers in all of the processors.  
 2. Internal data paths are 2 to 4 times wider than the external data bus for each processor.

- **IAX**—Accumulator for operands and results data.
- **EBX**—Pointer to data in the DS segment.
- **ECX**—Counter for string and loop operations.
- **EDX**—I/O pointer.
- **ESI**—Pointer to data in the segment pointed to by the DS register; source pointer for string operations.<sup>9</sup>
- **EDI**—Pointer to data (or destination) in the segment pointed to by the ES register; destination pointer for string operations.
- **ESP**—Stack pointer (in the SS segment).
- **EBP**—Pointer to data on the stack (in the SS segment).

### “Hello World” in Linux Assembly

- Use your favorite UNIX editor (*vi, emacs, pico, ...*)
- Assemble using NASM on [gl.umbc.edu](http://gl.umbc.edu) `nasm -f elf hello.asm`
- NASM documentation is on-line.
- Need to “load” the object file `ld hello.o`
- Execute
  - `a.out`

### x86 Addressing Modes

### 80x86 Addressing Modes

- We want to store the value 1734h.
- The value 1734h may be located in a register or in memory.
- The location in memory might be specified by the code, by a register, ...
- Assembly language syntax for MOV
  - MOV     DEST, SOURCE

**Notes on Addressing Modes**

- More complicated addressing modes later:  
 MOV EAX, [ESI+4\*ECX+12]
- Figures not drawn to scale. Constants 1734h and 08A94068h take 4 bytes (little endian).
- Some addressing modes are not supported by some operations.
- Labels represent addresses not contents of memory.
