

1. Define “binomial tree”.
2. Prove that binomial tree  $B_k$  has exactly  $2^k$  nodes.
3. Define “binomial queue”.
4. Prove that a binomial queue with  $N$  nodes contains node more than  $\lceil \log N \rceil$  nodes.
5. Explain how to merge two binomial queues.
6. Explain how to insert an item into a binomial queue.
7. Explain how to delete the minimum item from a binomial queue.
8. Prove that binomial tree  $B_k$  has binomial trees  $B_0, B_1, \dots, B_{k-1}$  as children of the root.
9. Show that  $N$  inserts into an initially empty binomial queue take  $O(N)$  time in the worst case.
