To: lomonaco@umbc.edu

Professor Lomonaco,

I am writing to inform you that the textbook you selected for course CMSC 203, 'Discrete Math. w/ Applications' by Epp, is available in digital format at the Bookstore for your students. This digital format offers a savings of \$61.70 over the new textbook price. According to the Used Textbook Association (<http://usedtextbookassociation.com/>), more than half of students say that the cost of textbooks poses a difficult financial burden on them. Providing digital textbooks is just one of the many ways the Bookstore is helping students with the high cost of books.

Using digital textbooks, students would be able to download, print, take notes, highlight/underline, and search for text using this newer technology. Most importantly perhaps to students, however, is the cost savings of this format. You may visit www.DigitalTextbooks.net for more information. If possible, please pass this information on to your students to assist them in making their textbook purchasing decisions.

If you have any questions about digital textbooks, the Used Textbook Association, or how the Bookstore is helping students with the high cost of textbooks, please feel free to email me at kakavas@umbc.edu or call me at 410-455-2699.

Sincerely,

Lisa Kakavas
Textbook Manager
